Research Interests

My current research spans a range of different topics in **Mobile Computing**, **Human-Computer Interaction** and **Multimodal Deep Learning**. Most of my research projects are problem-driven, aiming at solving interesting and impactful real-world challenges. I am recently investigating cyberlearning and technological assistance(e.g., **Multimodal Sensing**, **Mixed Reality/AR/VR**, **Humanoid Robot**) for teaching human motion tasks, which includes reliable sensing of human body configuration/cognitive load while learning, actuation for feedback-based guidance, algorithms for communicating motion and computational techniques for evaluating motion quality . I have built a AI-powered Sign Language teaching system using mixed-reality and recently am building a cognitive tutor system for dancing.
